

A Scientific Means for Islamic Military Alliance to Collaborate and Deploy

Dr. DAVID LEFFLER

Saudi Defence Minister and Deputy Crown Prince Mohammad bin Salman Al Saud announces the new “Islamic military alliance” aims to eliminate terrorism though collaboration.

The state-run Saudi Press Agency has announced that 34 nations are forming a new “Islamic military alliance” to fight terrorism.

But will this new alliance really be able to prevent future terrorist attacks and create lasting peace? There is no statistically validated guarantee that the military strategy of fighting violence with violence will work. It cer-

tainly has not in the past. Why should it now? History shows that using violence to quell violence ultimately just ratchets up the level of violence.

There is hope, however, if the new alliance honors its stated goal that terrorism “should be fought by all means and collaboration should be made to eliminate it.” Today a scientifically validated means exists to prevent terror-

ism and war, and all countries involved in the alliance could collaboratively deploy it. This scientific approach is known in military circles as Invincible Defense Technology (IDT). This field-tested approach to reducing stress and violence is already part of the training of Brazil’s Elite Police force, and has been field-tested by other militaries. It has been

validated by 23 peer-reviewed studies carried out in both developed and developing nations, including the Middle East, Africa, Southeast Asia, and Latin America. Independent scientists and scholars endorse it, based on 25 years of ongoing research.

IDT Reduces Societal Stress

As a specially trained military unit, an "IDT Prevention Wing of the Military" uses IDT to neutralize the buildup of stress in the national collective consciousness that ultimately fuels terrorism, war and crime. As collective stress and frustration subside, government leaders and citizens alike are more capable of finding orderly and constructive solutions to the issues that have separated them for generations.

Experience with IDT in highly stressed areas of the globe have demonstrated increased economic incentive and growth of prosperity. Individual creativity and entrepreneurship increase as well. With greater civic calm, citizens' aspirations rise and a more productive and balanced society emerges. Such a society naturally disallows violence as a means for change, or as an expression of discontent. With this, the ground for terrorism is eliminated. Moreover, this positive change in social trends takes place within a few days or weeks after IDT is introduced. The changes are measurable from such statistics as reduced terrorism, crime rates, accidents, hospital admissions, infant mortality, etc.

The IDT warrior's daily routine includes the non-religious practice of the Transcendental Meditation technique and the advanced TM-Sidhi program. Military personnel, functioning as a societal coherence-creating military unit, practice these techniques together in a group twice a day, seven days a week, preferably near the targeted population in a secure location. Their presence

need not be disclosed to achieve the effect of conflict resolution and violence reduction.

Such coherence-creating groups have achieved positive benefits to society, shown experientially, in just 48 hours. Modern statistical methods demonstrate a consistent causal influence of the IDT group on reducing conflict, precluding chance or coincidence. The IDT approach has been used during wartime, resulting in reduction of fighting, reduced war deaths and casualties, and improved progress toward resolving the conflict through peaceful means. Its coherence-creating effect has also been documented on a global scale in a study published in the *Journal of Offender Rehabilitation*. When large assemblies of civilian IDT experts gathered during the years 1983-1985, terrorism-related casualties decreased 72%, international conflict decreased 32%, and overall violence was reduced in nations without intrusion by other governments.

A civilian IDT group in Israel decreased the intensity of war in Lebanon in 1983 in a dramatic way in 48 hours, to name only one of 50 successful demonstrations. (See a summary of the study, published in the *Journal of Conflict Resolution* and summaries of follow-up studies in the *Journal of Social Behavior and Personality* and the *Journal of Scientific Exploration*).

Conclusion

IDT is totally unlike any other defense technology because it does not use violence in an attempt to

quell violence. It is a more civilized approach, yet the IDT defense technology supersedes all other known defense technologies (which are based on electronic, chemical, and/or nuclear forces). Therefore, militaries that deploy it gain the ultimate strategic advantage.

If the Islamic military alliance defense forces establish Prevention Wings of the Military, they will ease the current high tensions, reverse centuries of mistrust and hatred and permanently prevent future unrest. These IDT units will create genuine and lasting reconciliation and friendship where there was once only hatred and conflict. The powerful IDT human-resource-based defense technology disallows negative trends and prevents enemies from arising. No enemies means no terrorism and full security, as well as a normal, happy, productive life for everyone.

By eliminating terrorism and ending decades-old cycles of violence, the Islamic military alliance IDT units will create lasting peace and prosperity. Their powerful demonstration of this non-violent peace technology will gain worldwide attention. They will be honored and respected as great warriors who served honorably in their militaries for the betterment of all humanity.

Extensive scientific research objectively says, "Yes, this approach works." This is a military "means" that should be championed with "all means." It is desperately needed. There is truly no other solution.

The Islamic military alliance must act now, before high social tensions inevitably explode again. ♦
